

Agile Java Development Company

ABOUT US

JazzTeam has a proven track record of delivering high-quality software solutions over the last 12 years.

We are constantly evolving and refining our approach to help software technology companies do more with less: develop software solutions faster and ensure high quality within the time constraints, with fewer resources, and lower costs.

Friedrich Boeckh

Managing Director, Infopulse GmbH, Information Technology and Services, Germany

JazzTeam participated in the innovative project that I was supervising. The team has shown a high professional level in architectural design, Agile processes, unit testing, and involvement in the project. You can trust JazzTeam engineers, rely on them, and expect high quality provided by their Java experts.

WHAT WE DO

SOFTWARE DEVELOPMENT

Your business undergoes seasonal changes and you don't need a steady team for a whole year? No problem. With outsourcing, you can get only the required employees for the moment to address your current IT issues and achieve business objectives.

You get a dedicated team and the developers who will be only working on your projects. We can also take active participation in different aspects of your project, including management, processes, business analysis, architectural design, and R&D, if necessary. We propose a proactive and transparent approach.

TEST AUTOMATION

Engineering high-quality software for a long time, we have accumulated extensive QA experience. Thus, we successfully implement efficient testing approaches and methods even to complex projects.

We find issues quicker than you code. To solve a large number of issues and challenges in test automation, we have developed our own [XML2Selenium](#) framework.

CONSULTING SERVICE

JazzTeam services often include consulting. As a rule, we always have something valuable and new to suggest regarding test automation, processes management, and logistics of the projects we are working on. We always keep an eye out for the modern technology trends, implementing the world's best practices in our work.

WHY CHOOSE JAZZTEAM

- We are certified Java development professionals
- Transparent pricing
- Efficient communication
- Flexibility and individual approach
- Continuous integration
- Great company reputation
- Opportunity to expand the team

INDUSTRIES AND SOFTWARE TYPES

INDUSTRIES

■ QUALITY ASSURANCE

QA TESTING

All code and tasks are checked and thoroughly tested by our QA specialists.

This check allows preventing defects from occurring in the first place by the implementation of various procedures and policies.

CODE INSPECTION

At JazzTeam, we implement Code Review (also known as peer review). This allows us to find and fix mistakes overlooked during the initial development phase.

It improves both the overall quality of software as well as the developers' skills.

TEST-DRIVEN DEVELOPMENT (TDD)

We practice TDD processes. This allows checking the code as it is written, addressing, and fixing the errors right away. As a result, you get the end product of the best quality.

When applicable, pair programming can be easily adopted to your project.

SOCIAL ACTIVITIES

In recent years, JazzTeam experts have been recognized as the speakers at international Java conferences. In addition, our company has been organizing the Solit Regional IT Conference and developing our educational initiatives. JazzTeam has a public IT Academy that successfully functions since 2011.

■ SOME OF OUR PROJECTS

Well-proven service delivery model, combined with the excellent technical skills of our employees and professional management allow us to deliver complex projects on budget and on time.

HERE ARE SOME OF THE PROJECTS SUCCESSFULLY IMPLEMENTED BY JAZZTEAM:

- CRM System for a Major Telecom Company
- Telecommunication Information Management Center
- Automated UI Tests for the Travel Industry
- Medication Search Service
- Business Processes Automation Solution in Ecology Environmental Domain
- XML2Selenium (proprietary solution)

■ OUR CRUCIAL SUCCESS FACTS

1. One of our customers is Ezwim company, the market leader in Telecom Management Technology in Europe. Ezwim provides services to companies such as Omnitel, O2, and Vodafone.
2. As subcontractors, we have worked with the recognized global leaders such as Samsung and McKinsey & Company.
3. Our employees, working as a part of other companies, participated in the software development for Sopera, British Telecom, and Datalex.
4. Our company has extensive experience with IoT startups from around the world, including the USA, Spain, and Germany.
5. Our engineers carried out a project for the Latvian government.

■ OUR PARTNERS AND CUSTOMERS

■ CUSTOMER TESTIMONIALS

Michael O'Meara

Vice President, Infoview Systems Inc, the development of integration projects, Livonia, USA

We partnered with JazzTeam to expand our offshore team which allowed us to enhance our service offerings to our customers globally. Beginning with an initial project we were pleased with their efficient processes, good management, and high level of technical expertise they brought to the overall customer experience.
